Teka
Sinks

Key features to consider when buying a sink

Sink Configuration

Even though the bowl(number, size, depth, shape) is the main feature of the sink, it is not the only thing to bear in mind. You have other options that can make your sink more user-friendly and provide you with a nicer working area.

Drainers extend your working area and allow easy clean-up as well as food preparation. They will also keep the work surface clean and dry.

Teka colander bowls are available in either half or quarter bowl sizes. They can be used for rinsing, draining, straining and clean-up. Whatever your sink space, a colander bowl will give you another functioning utensil.

Relationship between sink size and capacity

Bowl depth, taper and radius are the three basic measurements for comparing sink sizes. Depth, of course, is the distance from the top of the rim to the bottom of the sink at the point nearest the drain.

Bowl taper is the inward slope of each side of the sink from the rim to the bottom. Radius is the measure of the bowl's corners and bottom where the sides and bottom meet.

One point to remember: the deeper the bowl, the straighter the slope, the smaller the radius, the bigger the capacity.

Accessories

Teka's optional accessories let you make the most of your sink, as they have been especially designed for each individual model. Crockery baskets, plate racks, colander bowls, chopping boards, waste disposal units etc. Will quickly become an indispensable part of your kitchen routine.

The right care of your accessories will extend their useful lives. Teka colanders, drain trays and vinyl-covered rinsing baskets should be hand washed, rinsed thoroughly and hand dried. Wooden chopping boards should never be soaked in water - rinse after each use and dry thoroughly.

Designer Undermounted Sinks

Twice is Better

Following the most trendy design in kitchens, the undermount sinks are becoming more and more popular. Teka has improved its range from the initial single bowls to the multibowls and drainers or double bowl models in different configurations.

The next step in the natural design evolution is the combination of single bowls to create a unique undermount sink area in your worktop that will differentiate your kitchen from the rest.
